

NOTIFICA SCIP

Substances of Concern In articles, as such or in complex objects (Products)

Dear customer,

European Regulation 1907/2006 of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) defines an article as “an object which during production is given a special shape, surface or design which determines its function to a greater degree than does its chemical composition”.

According to this definition, semi-finished products marketed by Musola Metalli S.p.A. are classified as articles. ECHA (European Chemicals Agency) has stipulated that as of 5 January 2021, anyone producing, assembling, importing, or distributing articles in the EU or, more in general, anyone in the supply chain who introduces articles onto the European market (article suppliers), will be required to notify the SCIP database only if the related articles contain SVHC substances included in the (Substances of Very High Concern) of “Candidate List del Reach” in concentrations greater than 0.1% by weight. Lead contained in the alloys we sell is a substance for which SCIP notification is mandatory.

Musola Metalli S.p.A. has submitted notifications regarding the articles and obtained the identification number SCIP which may be used by customers as established in the regulation.

The identification numbers obtained are reported below.

Instructions for safe use:

In its commercial form, this semi-finished metal product presents no danger to humans or the environment. In accordance with current safety and environmental regulations, you should assess the risk that dust or fumes containing lead may be released during processing operations such as cutting, grinding, machining, or casting, which could pose health hazards to your workers and the environment.

Exposure to dust or fumes containing lead must be avoided by using appropriate devices. Scrap and waste containing lead must be disposed of in compliance with applicable laws. You are required to provide the information above to your EU customers.

Additional voluntary information:

The use of lead in non-ferrous semi-finished products has been regulated for many years. For many metal alloys, there is still no alternative solution to the use of lead as used to increase the machinability of semi-finished products and improve other characteristics, particularly low friction and dry sliding properties.

Please feel free to contact us for any further information. Kind regards.

S. Martino B.A. (VR) 01/04/21
